Tracking Service Samples for PHP

This folder contains sample code for accessing Tracking services via the PHP cURL library. Samples are provided for these operations:

- GetTrackingSummary
- GetTrackingDetails
- GetSignatureImage
- GetDeliveryConfirmationCertificate

About These Samples

- These samples are meant to accompany the [Developer Program Getting Started Guide](#). They will help you validate that your Developer Program account is set up correctly, and will help you create your first Tracking request.

Conventions

- **_<install_directory>_** - This is the file folder where you have extracted these code samples into. Examples may include: CPCWS_Java_Samples; CPCWS_DotNet_Samples, or CPCWS_Tracking_PHP_Samples among others.
Prerequisites

- You must have a valid Developer Program developer account.
- You must be signed up to use Developer Program.
- Requires PHP 5.2.10 or newer with cURL extension enabled in php.ini.
- Also requires Eclipse version 3.6 with PHP Development Tools (PDT) or newer.
    - Follow the instructions on the Eclipse website to install Eclipse. http://www.eclipse.org/pdt/downloads/
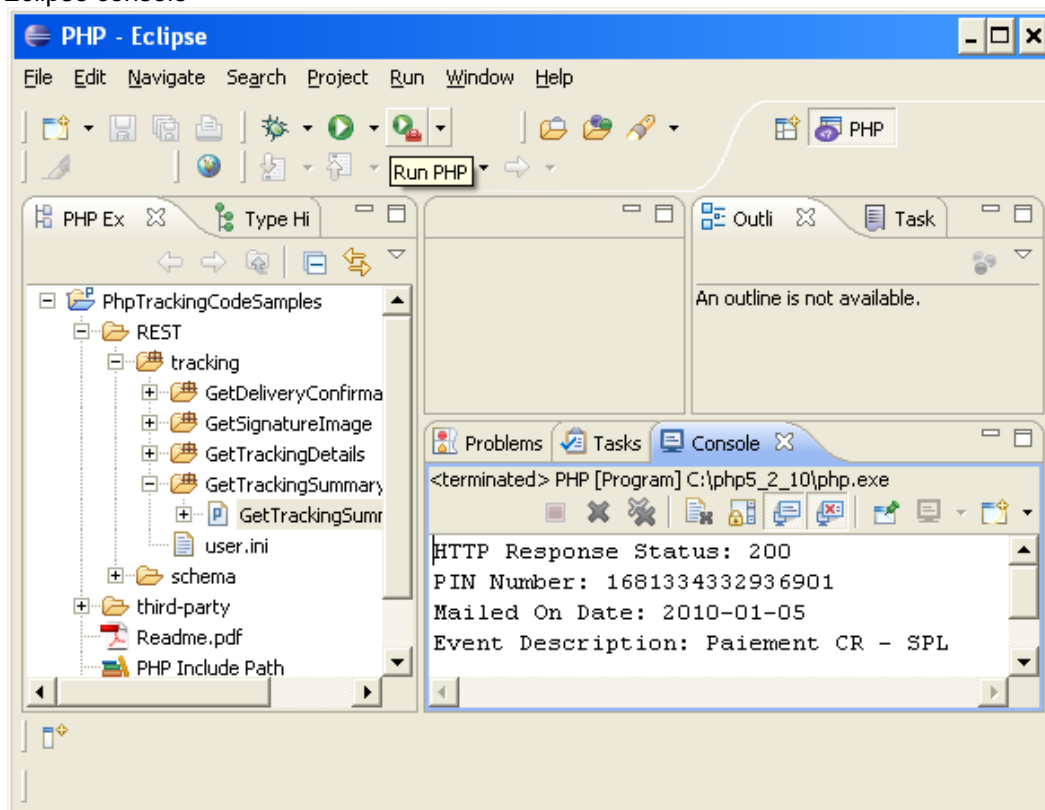

Running the Samples

1) Configure Eclipse to be able to execute PHP CLI and display output to console.
    a) From menu select **Run→External Tools→External Tools Configuration...**
    b) Click on **Program**.
    c) Click **New** button.

d) Enter the following configuration and update **Location** to point to where your **php.exe** is installed.

2) Click **Apply** button then click **Close** button.
3) Import PHP Project from extracted samples package.
   a) From the main menu bar, select **File → Import...**. The Import wizard opens.
   b) Select **General > Existing Project into Workspace** and click **Next**.
   c) Choose **Select root directory** and click the associated **Browse** to locate the directory of the extracted samples and select the **<install_directory>** directory.
   d) Under **Projects** select the project or projects which you would like to import.
   e) Click **Finish** to start the import.
4) Edit **<install_directory>\REST\tracking\user.ini** in the folder of extracted package.
   a) Update this file with your Developer Program username, password and customer number.

5) Select **GetTrackingSummary.php** file and Click on **External Tools** icon. View the output in the Eclipse console

6) Experiment with the other samples.
